

# The Water Source

PUBLIC WATER SUPPLY DISTRICT NO. 3  
OF JOHNSON COUNTY

## **Water Conservation Tips For Early Spring**

- ◆ Check the water pressure. Excessive pressure (more than 80 psi) can increase the chance of leaks.
- ◆ Make sure all irrigation rain sensors are working.
- ◆ Inspect all areas for leaks quarterly while performing preventative maintenance. Be sure to check laundry room, as well as hose bibs for drips.
- ◆ Inspect basement crawl spaces for leaks. Even small leaks here can cause devastating structural damage.
- ◆ Check your property for wet spots. These are common signs of an underground leak.
- ◆ Check for running faucets or toilets.
